Summary

Frontend developer with 4 years of commercial React and TypeScript experience in cross-functional product teams. Worked across the stack — React frontend through a Node BFF — and delivered end to end, from build and test through to production release. Design-system background: built a bank-wide component library to WCAG 2, then carried out design-system migrations on two product codebases.

Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend: React, Next.js, Zustand, Tailwind CSS, Sass, Vite, design systems, responsive design (RWD), accessibility (WCAG 2)

Backend / BFF: Node.js, REST APIs, PostgreSQL

Testing: Vitest, Jest, React Testing Library

Tooling: Git, GitHub Actions, Jenkins, Bamboo, Jira, Bitbucket, Codecov, SonarCloud

Worked in production codebases using: RxJS, NestJS, InversifyJS, Cypress, SSR

Experience

The Stepstone Group Polska

Frontend Developer · Jul 2023 – Jun 2026

Junior Frontend Developer · Jun 2022 – Jul 2023

Candidate profile product — CV upload, LinkedIn import, and profile completion feeding the group's job-matching systems. React frontend with a NestJS BFF (SSR), team of 5–7 owning delivery end to end.

- Owned a CV-upload modal shipped as a standalone package in its own repo: built from scratch, integrated the design system, added event tracking, persisted uploads to the profile service. Triggerable from any page in the product.
- Documented its cross-repository release process (three repos incl. a legacy monorepo), removing a dependency on other teams so any team member could ship it.
- Implemented UI for a LinkedIn profile-import feature across three redesigns — URL-based fetch, then authenticated import, then asynchronous background import — and contributed supporting BFF endpoints and data mapping.
- Migrated the profile application to the company design system; later assigned to a second team to do the same on their codebase.

- Owned frontend and BFF work for a full product rebrand: coordinated with designers, tested across environments, signed off the release.
- Wrote unit tests (Vitest, Jest), contributed to the team-owned Cypress E2E suite, and reviewed teammates' pull requests.

PKO Bank Polski

Junior Frontend Developer — Internal Design System · Jan 2021 – May 2022

Design-system team (frontend, UX, UI, QA, PO) building the component library used across the bank's web platform.

- Built and maintained components consumed by product teams bank-wide — pixel-perfect, responsive, and compliant with WCAG 2.
- Wrote the component documentation and supported other teams implementing the system.
- Built and maintained an internal component editor (PUG/Jade) for authoring and previewing components.
- Reviewed UX/UI designs for implementation feasibility, and reviewed teammates' code.

Earlier

Coordination and management roles in wholesale and hospitality, 2008–2019.

Projects

Shopping List Manager — offline-first list app with nested drag-and-drop

shopping-list-manager-seven.vercel.app · github.com/Kasia-Sikora/shopping-list-manager

React 19, TypeScript (strict), Zustand, IndexedDB, Next.js API, PostgreSQL. IndexedDB is the source of truth; a background sync engine reconciles with the backend using an outbox queue, backoff retries and last-write-wins conflict resolution. 250+ tests, CI with coverage and static-analysis gates. Lighthouse 100 desktop / 94 mobile.

Education

Full-stack Developer course — Codecool, 2019–2020

Matura (secondary education)
